Sunair is pleased to report that two orders for assembly of a total of twenty units of 8133010098 have been received, and that no defects have been found.

This is impressive given that this assembly is a densely populated 13" by 15" PCB containing 997 components and 118 distinct component types. This is the largest and most complex PC assembly designed by Sunair to date.

The efforts of the JRE staff and management have been instrumental in creating a complex product under severe time constraints.

Thanks very much,
